## **Algebraic K-theory of Crystallographic Groups: The Three-Dimensional Splitting Case (Lecture Notes in Mathematics)** Daniel Scott Farley, Ivonne Johanna Ortiz

The Farrell-Jones isomorphism conjecture in algebraic K-theory offers a description of the algebraic K-theory of a group using a generalized homology theory. In cases where the conjecture is known to be a theorem, it gives a powerful method for computing the lower algebraic K-theory of a group. This book contains a computation of the lower algebraic K-theory of the split three-dimensional crystallographic groups, a geometrically important class of three-dimensional crystallographic group, representing a third of the total number. The book leads the reader through all aspects of the calculation. The first chapters describe the split crystallographic groups and their classifying spaces. Later chapters assemble the techniques that are needed to apply the isomorphism theorem. The result is a useful starting point for researchers who are interested in the computational side of the Farrell-Jones isomorphism conjecture, and a contribution to the growing literature in the field.

### **From reader reviews:**

#### **Leticia Brewster:**

Spent a free time for you to be fun activity to perform! A lot of people spent their sparetime with their family, or their particular friends. Usually they carrying out activity like watching television, gonna beach, or picnic inside park. They actually doing same thing every week. Do you feel it? Do you wish to something different to fill your personal free time/ holiday? Can be reading a book can be option to fill your cost-free time/ holiday. The first thing you ask may be what kinds of publication that you should read. If you want to test look for book, may be the guide untitled Algebraic K-theory of Crystallographic Groups: The Three-Dimensional Splitting Case (Lecture Notes in Mathematics) can be excellent book to read. May be it can be best activity to you.

#### **Linda Hupp:**

Playing with family in the park, coming to see the sea world or hanging out with close friends is thing that usually you could have done when you have spare time, subsequently why you don't try factor that really opposite from that. One activity that make you not experience tired but still relaxing, trilling like on roller coaster you have been ride on and with addition of knowledge. Even you love Algebraic K-theory of Crystallographic Groups: The Three-Dimensional Splitting Case (Lecture Notes in Mathematics), you may enjoy both. It is excellent combination right, you still need to miss it? What kind of hangout type is it? Oh seriously its mind hangout guys. What? Still don't buy it, oh come on its named reading friends.

#### **Janice Delarosa:**

Is it you who having spare time then spend it whole day by watching television programs or just lying down on the bed? Do you need something totally new? This Algebraic K-theory of Crystallographic Groups: The Three-Dimensional Splitting Case (Lecture Notes in Mathematics) can be the reply, oh how comes? A book you know. You are consequently out of date, spending your spare time by reading in this brand new era is common not a nerd activity. So what these publications have than the others?

#### **Willis Newby:**

As a student exactly feel bored to be able to reading. If their teacher expected them to go to the library in order to make summary for some guide, they are complained. Just tiny students that has reading's spirit or real their hobby. They just do what the teacher want, like asked to go to the library. They go to presently there but nothing reading really. Any students feel that examining is not important, boring and can't see colorful photos on there. Yeah, it is being complicated. Book is very important for you personally. As we know that on this time, many ways to get whatever we really wish for. Likewise word says, ways to reach Chinese's country. Therefore this Algebraic K-theory of Crystallographic Groups: The Three-Dimensional Splitting Case (Lecture Notes in Mathematics) can make you feel more interested to read.
