Even in the earliest stages of progressive dementia, patients have difficulty evaluating their own needs and engaging in appropriate activities. A therapeutic program of care, including constructive activities and behavior management, is necessary for maximizing patients' functioning and quality of life. The Handbook of Dementia Care and its companion Training Manual and Video for Dementia Care Specialists offer a complete training system for teachers and students providing dementia care in a variety of settings.

Developed at the well-known George G. Glenner Alzheimer's Family Centers, the program's instructor's manual and student handbook are organized into six teaching modules: basic information on dementia, positive interaction techniques, supportive physical environment, therapeutic activities, group activities, and family support. Each module is accompanied by a videotaped lecture and demonstration presentation to further illustrate the topic being discussed. This exciting project is a comprehensive instructional tool for dementia care professionals working in adult day centers, long-term care and residential settings, hospitals, nursing homes, and home health care agencies.
