Excerpt from The New Practical Builder, and Workman's Companion: Containing a Full Display and Elucidation of the Most Recent and Skilful Methods, Pursued by Architects and Artificers

The Work here respectfully submitted to the Public will be found to comprehend the Present Practice of the Art of Building, reduced to Purely Scientific and Geometrical Principles, and yet explained in a manner so simple, as to be easily intelligible to any attentive Reader.

To facilitate this important object, the Authors have commenced with a short Treatise on Geometry, theoretical and practical, peculiarly adapted to the general object of the Work, and containing such theorems and problems only as are absolutely necessary to be understood by every person connected with the leading departments of the art.

And here the Authors cannot refrain from adding a few words, with a view to impress upon the minds of Workmen engaged in the construction of buildings, whether Carpenter, Joiner, Mason, or Bricklayer, the Paramount and Unspeakable Importance of obtaining some knowledge of the principles of geometry; since, of all the numerous classes, concerned in mechanical arts, they require the most intimate acquaintance with this science.

The execution of the design of the architect is generally left to the skill of the Workman; who is, of course, presumed to be fully competent to the performance of the task which he undertakes.
