This conference proceeding presents and discusses problems in the specification, design, implementation, and evaluation of application-specific architectures, systems, and models. Signal and image processing is such an increasingly commercial and consumer application area with specific chip sets and higher order integration developed on the basis of specialty processor needs. The special problems of CAD covered here, with the need to draw on unforeseen creative demands of human designers, presents unique problems that precede application on the broader scales of industrial, business, and consumer applications.
